FOR IMMEDIATE RELEASE

BLUEWARE ANNOUNCES A SAAS STATEMENT OF DIRECTION

New Direction of Software Will Allow Customers to Deploy Wellness Connection Across the Internet

Cadillac, Michigan—August 28th, 2008 -- BlueWare, INC. announces their intent to make available the *Wellness Connection* Electronic Health Record application as a service.

By delivering the software as a service (known as the SaaS model), BlueWare significantly lowers the barriers to health-care providers around the world to leverage their specialized solutions.

The SaaS model means the customer will no longer be required to install and run the *Wellness Connection* software application from their own server, which will eliminate the burden of maintenance, ongoing operation, and support for the customer. In addition to reducing complexity of managing an Electronic Health Record system for the end-user, moving to a SaaS offering will also allow BlueWare to offer their product at a lower introductory cost.

The adoption of the SaaS model also means that administration duties will be able to be managed from a central location, lessening the daily administration duties for the customer, and a more centralized means of feature updating. As BlueWare develops new features and functions you will be able to utilize them without expensive and disruptive upgrades.

In 2007 BlueWare received SOA (Service Oriented Architecture) Connect Validation from IBM. BlueWare CEO Rose Harr said, "Building on our SOA focus, this new offering is a continuation of our strategy to meet the evolving needs of the marketplace. We, along with many other software providers, believe that who would be better to manage BlueWare software than BlueWare?"

Timothy Chou, a pioneer of On Demand software models, and author of the book, *The End of Software and Seven*, comments, "We've already seen the power of the global network to deliver game changing consumer applications. It's now time for specialized software companies to do the same thing for business applications. BlueWare is making just that step".

About BlueWare, Inc.

BlueWare is an international software corporation dedicated to the healthcare industry. We develop and support a family of products that delivers a comprehensive electronic health record.

BlueWare believes in a healthcare environment where information is accessible, accurate, and comprehensive. We devote our work to advancing a longitudinal electronic health record that interoperates with various systems to create the most complete record on the market. We believe that we can utilize each system within your facility to coordinate all patient information together into one user-friendly system, creating the all digital health record from "cradle to grave".
