FOR IMMEDIATE RELEASE

BlueWare Finalist for IBM Information Management Awards

BlueWare One of Two Finalists for Information Management Solution Excellence Award

Cadillac, MI—November 3rd, 2008 -- BlueWare was named one of two finalists for the 2008 Information Management Solution Excellence Award that was given out at the *IBM Information On Demand Conference* October 26th, 2008 in Las Vegas, Nevada. During the conference there was a special ceremony that recognized the winners and finalists of the award.

According to IBM this category recognizes those IBM Business Partners who have adopted and leveraged the latest Information Management technology to demonstrate a unique and powerful Information On Demand solution.

"Our partners are critical to the success of IBM's Information On Demand strategy and we are delighted to recognize this group of leaders with the 2008 Information Management Business Partner Awards," said Neil Isford, vice president, Worldwide Information Management Sales, IBM. "We look forward to continuing our collaboration with all of our partners, because their solutions and deep expertise provide superior business value to our joint clients."

BlueWare's flagship product Wellness Connection Electronic Health Record is built on IBM's Information On Demand products. It gives secure, immediate access to patient information, anytime, anywhere, and provides decision support for the entire community of caregivers. With the patient history on demand, physicians can make better informed decisions, and focus their energies on doing what they are trained to do – provide care. Patient information, including contact data, demographics, care history, allergies, x-rays, lab results, etc. is all captured either by scanning the information, or by integrating with various information systems within the hospital. Wellness Connection is able to marry all information together in one place. The system can capture non-computer generated reports as well as patient reports from existing computer systems. After all this information is captured, it is securely stored using an intelligent folder tab system.

"I am very pleased with what BlueWare is delivering in Version 4 and the timelines that have been met. I can see an improvement in their performance within the last year. I like that they have a clear understanding of our needs and are able to deliver results that address those needs," said Dr. Headrick of Genesys Health Services. Wellness Connection EHR leverages a wide variety of IBM technologies. The solution is built on Content Manager, and runs on the System i Platform.
